Radiology/Pathology Team-Based Medicine: A Case-Based Presentation of Useful Correlative Features

Chairs:
David C. Wilbur, Harvard Medical School, Boston, MA, USA
Scott F. Wilbur, University of Rochester, Rochester, NY, USA

Speakers:
This case-based session presented by a cytotechnologist, pathologist, and radiologist team, will discuss an interesting variety of lesions from fine needle aspiration and exfoliative specimens. There will be emphasis placed on the correlative radiologic findings that can aid the cytologist in arriving at a correct diagnosis. The importance of team-based delivery of care, appropriate specimen triage, will be discussed and demonstrated to show how this model plays an integral role in providing patient-centered care. Morphologic criteria will be discussed for both cytology and surgical pathology specimens, along with triage to the use of ancillary studies. Pitfalls in both
